

Kilo CLI

The essential terminal and slash commands, ready to keep at hand.

00 IN THE TERMINAL

<code>npm i -g @kilocode/cli</code>	Install	<code>kilo run "..."</code>	Run a prompt, no UI
<code>kilo</code>	Start the interface (TUI)	<code>kilo run --auto "..."</code>	Autonomous mode (CI/CD)
<code>kilo -c</code>	Continue the last session	<code>kilo upgrade</code>	Update Kilo

01 GETTING STARTED

<code>/connect</code>	Add a provider + API key
<code>/init</code>	Create or update AGENTS.md
<code>/goal</code>	Set a session goal
<code>/help</code>	List every command

02 MODELS & AGENTS

<code>/models</code>	Switch model
<code>/agents</code>	Switch agent (Ask, Debug...)
<code>/mcp</code>	Toggle MCP servers

03 SYSTEM

<code>/auto-approve</code>	Approve everything (use with care)
<code>/status</code>	View Kilo's status
<code>/reload</code>	Reload config, skills, agents
<code>/themes</code>	Switch theme
<code>/exit</code>	Quit (alias /q)

04 SESSIONS

<code>/new</code>	New session (alias /clear)
<code>/sessions</code>	Resume a past session
<code>/compact</code>	Summarize when context fills up
<code>/undo · /redo</code>	Undo or redo a message
<code>/fork</code>	Branch off an earlier message
<code>/rename</code>	Rename the session

05 CODE & REVIEW

<code>/review</code>	Review your current changes
<code>/review branch</code>	Review the branch vs its base
<code>/diff</code>	Open the diff viewer
<code>/editor</code>	Write long prompts in your editor
<code>/copy</code>	Copy the latest response

06 MIGRATE (AFTER /NEW)

<code>/resume-claude</code>	Import a Claude Code session
<code>/resume-codex</code>	Import a Codex session

Pasting a prompt

Cmd+V (Mac), Ctrl+Shift+V (Linux), Ctrl+V (Windows). Long pastes show as [Pasted ~N lines].

Configuration

Global: ~/.config/kilo/kilo.jsonc.
Project: ./kilo/ — project config takes precedence.

Good habits

/init at the start, /compact when it gets long, /review before every commit.
